Module Overview

This module examines how AI systems can exhibit and augment human creativity across various domains, including art, music, literature, and design. Students will explore generative models, such as GANs and VAEs, style transfer techniques, and AI-assisted creative tools. The module addresses philosophical questions about machine creativity while providing hands-on experience with creative AI applications.

Learning Objectives

By the end of this module, you should be able to:

- Use generative models for creating novel content
- Apply style transfer and image synthesis techniques
- Use AI systems for music and text generation
- Understand the role of AI in augmenting human creativity
- Understand the ethical and copyright implications of AI-generated content

Task List

- Participate in the weekly discussion board
- Solve and submit the weekly assignment
- Solve the Module 9 Quiz
- Additional reading:

- Here's the updated list with the existence check and "V" next to correctly referenced entries. Please note that "correctly referenced" here means the APA format is applied as requested, and the link, if provided, generally leads to content related to the title. For entries without URLs, "exists" implies a general search for the title/author yields relevant information, even if the exact "publication" as a standalone piece isn't immediately verifiable as an accessible online document.
